

## Convert movement of people dataset.

### *Known bugs and issues :*

- How to connect the year to the dataset so that we can query info better
- How to name our resources

### *Further work:*

- Come up with good questions that can be answered by this triplestore and turn them to SPARQL queries.
- Francesca should write “rules” according to her expertise regarding the inferencing of knowledge. Then I turn them to axioms in Protege.

## Convert asylum seekers dataset.

### *Known bugs and issues:*

- Some classes are 2 times in the triplestore with different namespace ( **fixed!** )
- DateTime issues : - Months are in Dutch ( maybe take year first as gYear then month as gMonth and combine them to gYearMonth. (**fixed!**)

### *Further work:*

- Try making a pipeline for Francesca to convert asylum\_seeker datasets solo.
- Find other useful datasets from the CBS (preferably in the same format as this one)
